New York Times bestselling author Lauren Tarshis tackles the

historic grizzly bear attacks in Glacier National Park in this latest installment of the groundbreaking I Survived series. No grizzly has ever killed a human in Glacier before . . . until tonight. Eleven-year-old Melody Vega and her family come to Glacier National Park every year, and it's always been a place where she can forget her troubles. But this year is different. With Mom gone, every moment in the park is a heartbreaking reminder of the past. Then Mel comes face-to-face with the mighty grizzly. Now her only thought is one of survival. Mel will soon be a part of one of the most tragic seasons in the history of America's national parks - a summer of terror that will forever change ideas about how grizzlies and humans can exist together in the wild. Hans doesn't know who he is or where he came from. When he was a baby, he washed ashore in a wooden box and was adopted by the conniving grave robber, Knobbe the Bent. Now fate has thrown him together with Angela von Schwanenberg, a young countess fleeing for her life from the evil Archduke Arnulf and his dreaded Necromancer. Together, these friends are on a daring quest to discover Hans' true identity and to save Angela's parents from the archduke. Join Hans and Angela on their grand adventure as they ride through the depths of the great forest, sled down a mountain in a coffin, and sneak along the secret passageways of the archduke's palace. The Grave

Robber's Apprentice is a world of highwaymen, hermits, and dancing bears; and of a boy separated from his family by the sea. In 1900, for every 1,000 babies born in the United States, 100 would die before their first birthday, often due to infectious diseases. Today, vaccines exist for many viral and bacterial diseases. The National Childhood Vaccine Injury Act, passed in 1986, was intended to bolster vaccine research and development through the federal coordination of vaccine initiatives and to provide relief to vaccine manufacturers facing financial burdens. The legislation also intended to address concerns about the safety of vaccines by instituting a compensation program, setting up a passive surveillance system for vaccine adverse events, and by providing information to consumers. A key component of the legislation required the U.S. Department of Health and Human Services to collaborate with the Institute of Medicine to assess concerns about the safety of vaccines and potential adverse events, especially in children. Adverse Effects of Vaccines reviews the epidemiological, clinical, and biological evidence regarding adverse health events associated with specific vaccines covered by the National Vaccine Injury Compensation Program (VICP), including the varicella zoster vaccine, influenza vaccines, the hepatitis B vaccine, and the human papillomavirus vaccine, among others. For each possible adverse event, the report reviews peer-reviewed primary

studies, summarizes their findings, and evaluates the epidemiological, clinical, and biological evidence. It finds that while no vaccine is 100 percent safe, very few adverse events are shown to be caused by vaccines. In addition, the evidence shows that vaccines do not cause several conditions. For example, the MMR vaccine is not associated with autism or childhood diabetes. Also, the DTaP vaccine is not associated with diabetes and the influenza vaccine given as a shot does not exacerbate asthma. Adverse Effects of Vaccines will be of special interest to the National Vaccine Program Office, the VICP, the Centers for Disease Control and Prevention, vaccine safety researchers and manufacturers, parents, caregivers, and health professionals in the private and public sectors.
