

includes all those involved with the management of roads, including industry and students seeking to learn more about the fundamental concepts, principles, issues and procedures associated with pavement technology. Part 2: Pavement Structural Design-provides advice for the structural design of sealed road pavements. The advice has been generally developed from the approaches followed in the Austroads member authorities. However, as it encompasses the wide range of materials and conditions found in Australia and New Zealand, some parts are broadly based. This part covers the assessment of input parameters needed for design, design methods for flexible and rigid pavements, and gives guidance to the economic comparisons of alternative pavement designs.

A Sourcebook for Engaging with Civil Society Organizations in Asian Development Bank Operations Feb 28 2021 Many countries are exploring the use of concrete to improve the reliability of their road networks. However, many developers, agencies, and companies in the construction industry do not yet have sufficient experience in the use of concrete pavement. This can lead to poorly planned, supervised, or executed infrastructure that requires premature and costly repairs or maintenance. This guide explains the factors to investigate and considerations to evaluate as well as the potential risks and mistakes to avoid when planning and constructing concrete pavement. It is a comprehensive resource that will be especially useful for stakeholders in developing countries.
