Between Security Markets and Protection Rackets Apr 15 2022 Security is a social practice, which constitutes different formations of political order. Developing a political economy of security practice, the author distinguishes these formations with a view to the actual exchanges between various providers and receivers of security services. He thus departs from a popular perspective in political science, which charts ongoing transformations in the global security landscape along a series of categorical divisions between state and non-state or between the public and the private. A more rewarding analytical perspective conceives the two most dominant security formations in the contemporary world as either based on commercial or on compulsory relations.

Terrorism Online Nov 10 2021 This book investigates the intersection of terrorism, digital technologies and cyberspace. The evolving field of cyber-terrorism research is dominated by single-perspective, technological, political, or sociological texts. In contrast, Terrorism Online uses a multi-disciplinary framework to provide a broader introduction to debates and developments that have largely been conducted in isolation. Drawing together key academics from a range of disciplinary fields, including Computer Science, Engineering, Social Psychology, International Relations, Law and Politics, the volume focuses on three broad themes: 1) how - and why - do terrorists engage with the Internet, digital technologies and cyberspace?; 2) what threat do these various activities pose, and to whom?; 3) how might these activities be prevented, deterred or addressed? Exploring these themes, the book engages with a range of contemporary case studies and different forms of terrorism: from lone-actor terrorists and protest activities associated with 'hacktivist' groups to state-based terrorism. Through the book's engagement with questions of law, politics, technology and beyond, the volume offers a holistic approach to cyberterrorism which provides a unique and invaluable contribution to this subject matter. This book will be of great interest to students of cybersecurity, security studies, terrorism and International Relations.
