AMLS: Advanced Medical Life Support is the leading course for prehospital practitioners in advanced medical assessment and treatment of commonly encountered medical conditions. Taught across the globe since 1999, AMLS was the first EMS education program to fully address how to best manage patients in medical crises. Created by the National Association of Emergency Medical Technicians (NAEMT) and endorsed by the National Association of EMS Physicians (NAEMSP), AMLS emphasizes the use of the AMLS Assessment Pathway. This essential assessment tool empowers prehospital practitioners to rapidly diagnose medical patients and initiate effective management in the field. AMLS is the only textbook approved for use in NAEMT's Advanced Medical Life Support course. Its medical content is continuously revised and updated to reflect current, evidence-based knowledge and practice. The AMLS philosophy is centered on using critical thinking to assess patients and formulate management plans. A Clear Approach to Assessing a Medical Patient In the field, seconds count. The AMLS Assessment Pathway provides a systematic approach to

assessment of a medical patient that enables prehospital practitioners to diagnose medical patients with urgent accuracy. BDLS is an 8 hour course which presents clinical and public health implications of natural and human-caused events, explosions and traumatic events, nuclear and radiologic events, biologic events, and chemical events. Also included is information on the health professional's role in the public health and incident management systems, mental and behavioral health and special considerations for people with access and functional needs. Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide. Simulation and skills centres have become established to integrate simulation into mainstream education in all medical, nursing, and paramedical fields. Borrowing from the experience and methodologies of industries that are using simulation, medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula. This book assists

both novice and experienced workers in the field to learn from established practitioners in medical simulation. Simulation has been used to enhance the educational experience in a diverse range of fields; therefore a wide variety of disciplines are represented. The book begins with a section on the logistics of establishing a simulation and training centre and the inherent problems with funding, equipment, staffing and course development, and promotion. Section 2 deals with simulators and related training devices that are required to equip a stand-alone or institution-based centre. The features, strengths, and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements. There is a guide to producing scenarios and medical props that can enhance the training experience. The third section covers adult education and it reviews the steps required to develop courses that comply with 'best practice' in medical education. Teaching skills, facilitating problem-based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education. The manual concludes with guides for the major specialties that use simulation, including military, paediatrics, CPR and medical response teams, obstetrics, and anaesthesia. Updated to reflect the new 2005 emergency cardiovascular care guidelines! Popular author, Barbara Aehlert, incorporates both prehospital and hospital management of pediatric

emergencies. In a concise, easy-to-read outline format, it provides the most essential information a provider needs. It is also the approved text for the American Safety & Health Institute's (ASHI) pediatric advanced life support course. For more information on ASHI courses, call 800-246-5101 or visit [www.ashinstitute.org](http://www.ashinstitute.org). Instructor resources available. Contact your sales representative for details. An outline format featuring bulleted lists, concise tables, and a user-friendly writing style makes this comprehensive text incredibly easy to read and understand. A Pretest and a Posttest consisting of multiple choice, true/false, fill in the blank, and essay questions tests readers' overall comprehension of the material. Updated to reflect the new 2005 emergency cardiovascular care guidelines. PALS Pediatric Boxes help readers apply information covered in the text to real-life clinical situations. Sidebars contain additional information relevant to the topics covered in the chapters, giving readers an opportunity for further learning. A laminated quick reference card gives practitioners easy access to critical information in the field or hospital. This convenient card includes essential information regarding respiratory and heart rates, blood pressure, basic life support interventions, Glasgow Coma Scale, airway size and equipment selection for intubation corresponding to the Broselow Resuscitation Tape, several pediatric algorithms, and pain assessment tools. Pediatric Education for Prehospital Professionals (PEPP), Fourth Edition is an

evidence-based resource of essential medical content for the assessment and management of infants and children in the field. This respected and ground-breaking program paired pediatric physicians and EMS providers together to ensure the content reflects current best practices and the realities of the field. Developed by the American Academy of Pediatrics, PEP-10 is designed to give prehospital professionals the knowledge, skills, and confidence they need to effectively assess and manage pediatric patients. PEP-10 combines world-class content with engaging features and an interactive course that truly prepare prehospital professionals to care for pediatric patients. The Fourth Edition Includes: A new chapter on Behavioral Emergencies A top-flight EMS author team working with AAP physician reviewers to ensure exceptional medical content with a focus on how it is applied in the "streets" New procedures on tourniquet application and intranasal medication administration Features Include: The Pediatric Assessment Triangle (PAT) represents the essence of the PEP-10 patient assessment method, which includes assessing appearance, work of breathing, and circulation to the skin. The Patient Assessment Flowchart provides students with an easy-to-understand reference of the pediatric patient assessment process. Case Studies provide opportunity for students to apply the foundational knowledge presented in the chapter and strengthen their critical-thinking skills. Procedures provide step-by-step explanations and visual summaries of vital BLS and ALS pediatric care.

skills. Flexible Course Options: PEPP Course Coordinators may offer a 2-day onsite course or a 1-day enhanced hybrid course at the BLS or ALS level. The onsite course features interactive case-based lectures where students apply their knowledge in a safe environment. The hybrid course features case-based online modules with engaging interactivities, including rapid skills demonstration videos that students complete before attending the onsite portion for hands-on skill station coaching and small-group discussions. The BLS level courses are geared toward emergency responders EMTs, while the ALS-level courses are geared toward AEMTs and Paramedics. 20-1132 This work represents a comprehensive source of prehospital medical information on the emergency care of infants and children and has been designed to teach professionals how to better assess and manage ill or injured children. The purpose of this study was to test the effect of two teaching methods: the traditional lecture method and the modular self-paced method, on the retention of Cardiopulmonary Resuscitation (CPR) cognitive knowledge and psychomotor skills of the lay community three months after completion of the class. The primary question to be examined was: does the method of instruction affect retention of Basic Life Support (BLS) knowledge and skill? The sample population consisted of 12 males and 12 females from the area in and around La Crosse, Wisconsin. Participants completing the course regardless of teaching format earned a one-year BLS certification through the

American Heart Association. At the initial CPR class a psychomotor skills test and 50-item multiple choice pre was administered. At the three month follow-up session psychomotor skills were tested. The independent groups was the statistical test used to analyze the dependent quantitative interval variable, retention scores, and the independent between subjects variable, the modular self paced versus the traditional classroom instruction teaching formats. Results of the data analysis indicated that the was statistically significant ( $t=-3.50$ ,  $df=19$ ,  $p$  PreTest® closest you can get to seeing the test before you take it. State University/Detroit Receiving Hospital in Detroit, Michigan. This landmark publication published by the AAMC identifies a list of integrated activities to be expected of all M.D. graduates making the transition from medical school to residency. This guide delineates 13 Entrustable Professional Activities (EPAs) that all entering residents should be expected to perform on day 1 of residency with direct supervision regardless of specialty choice. The Core EPAs for Entering Residency are designed to be a subset of all of the graduation requirements of a medical school. Individual schools may have additional mission-specific graduation requirements, and specialties may have specialty-specific EPAs that would be required after the student has made a specialty decision but before residency matriculation. The Core EPAs may also be foundational to an EPA for any practicing physician or for specialty-specific EPAs. Updated in August 2014, the AAMC selected ten institutions to join a five-year pilot to test the implementation of the Core Entrustable Professional Activities (EPAs) for Entering Residency. More than 70 institutions, representing over 50% of the medical schools accredited by the U.S. Liaison Committee on Medical Education (LCME), applied to join the pilot, demonstrating the significant energy and enthusiasm towards closing the gap between expectations and performance for residents on day one. The cohort reflects the breadth and diversity of the applicant pool, and the institutions selected are intended to complement each other.

other through the unique qualities and skills that each t and institution brings to the pilot. Faculty and Learners' Guide (69 pages) - Developing faculty: The EPA descriptions, the expected behaviors, and the vignettes expected to serve as the foundation for faculty development. Faculty can use this guide as a reference for both feedback and assessment in pre-clinical and clinical settings.- Developing learners: Learners can also use this document to understand the core of what is expected of them by the time they graduate. The EPA descriptions themselves delineate the expectations, while the developmental progression laid out from pre-entrustable to entrustable behaviors can serve as the roadmap for achieving them.
