Ole Evinrude and His Outboard Motor Aug 16 2022 Wisconsin entrepreneur Ole Evinrude will inspire children in this addition to the Badger Biographies series for young readers, where the story of Ole's invention, from drawing board to factory floor, is told in a reader-friendly format that includes historic images, a glossary of terms, and sidebars explaining how an outboard motor works. Ole Evinrude was born in Norway in 1877 and immigrated to the United States when he was five years old. The Evinrude family settled in Wisconsin and began farming, but it was clear from a very young age that Ole would not follow the family tradition. Ole Evinrude was meant to work with boats. Building an outboard motor was not easy, though - Ole suffered numerous mechanical and financial setbacks along the way. After years of hard work and persistence, the Evinrude motor company was founded and Ole's outboard motors were an instant hit around the world. Ole continued to improve the design of his motor and attracted other entrepreneurs to the area, making Wisconsin the center of the outboard motor industry for decades.

Metal Corrosion in Boats Oct 26 2020 " In the never-ending war against rust and corrosion, knowledge of the enemy is the sailor s best defense, and Nigel Warren is the Sun Tzu of corrosion. His third edition of Metal Corrosion in Boats covers all aspects of this often perplexing subject on how to prevent or at last reduce the harmful effects of water hulls, engines, rigging and fittings. While great attention is given to the age-old problem of galvanic corrosion, this new edition delves deeper into the effects of electrolytic corrosion, fast becoming a greater concern as more boats are plugging in to shore power. Modern super sealants, copper sheathing and chromium plating are also examined. A useful reference tool for boat owners and builders alike, Warren s book contains helpful color illustrations, and clear informative diagrams and tables. -- Sailing"--Amazon.com viewed Nov. 15, 2022.

Making Waves Nov 14 2019 Michigan will always be known as the automobile capital of the world, but the Great Lakes State boasts a similarly rich heritage in the development of boat building in America. By the late nineteenth century, Michigan had emerged as the industry’s hub, drawing together the most talented designers, builders, and engine makers to produce some of the fastest and most innovative boats ever created. Within decades, gifted Michigan entrepreneurs like Christopher Columbus Smith, John L. Hacker, and Gar Wood had established some of the nation’s top boat brands and brought the prospect of boat ownership within reach for American consumers from all ranges of income. More than just revolutionizing recreational boating, Michigan boat builders also left their mark on history—from developing the speedy runabouts favored by illicit rum-runners during the Prohibition era to creating the landing craft that carried Allied forces to shores in Europe and the Pacific in WWII. In Making Waves, Scott M. Peters explores this intriguing story of people, processes, and products—of an industry that evolved in Michigan but would change boating across the world.

British Motor Gun Boat 1939–45 Jan 29 2021 Motor Gun Boats were the “Spitfires of the Seas” of the Royal Navy. Bristling with small-calibre guns and machine guns, they served in a variety of roles during the War. In the early war period they battled against German E-boats in the English Channel, then went on the offensive, searching the enemy shore for targets of opportunity. At other times, they ran support for Motor Torpedo Boats and were used to deliver commandos on various raids. Naval Warfare expert, Angus Konstam, tells the story of these small, but destructive boats, beginning with their design and development and carrying through to their operational use in both the European and Mediterranean theatres of World War II.
