The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacturer's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material. This 1964 Pontiac Air Conditioning Shop Manual is a high-quality, licensed PRINT reproduction of the service manual authored by General Motors Corporation and published by Detroit Iron. This OEM factory manual is 8.5 x 11 inches, paperback bound, shrink-wrapped and contains 152 pages of comprehensive mechanical instructions with detailed diagrams, photos and specifications for the air conditioner. Service / repair manuals were originally written by the automotive manufacturer to be used by their dealership mechanics. The following 1964 Pontiac models are covered: Bonneville, Catalina, Grand Prix, LeMans, GTO, Star Chief, Tempest. This factory written Detroit Iron shop manual is perfect for the restorer or anyone working on one of these vehicles. Based on methods approved by the American Society of Heating, Refrigerating, and Air Conditioning Engineers, the book provides expert coverage of HVAC fundamentals as well as step-by-step design and application methods. Filled with examples, the manual is meant to simplify such tasks as calculating the heat loss rate of a building and choosing the right system controls. This practical and concise manual is a must for HVAC designers and engineers, engineers without HVAC experience, technicians, contractors, and other engineering professionals. Written for the do-it-yourselfer, good enough for the pro. Includes everything you wish to know about your vehicles heating and air conditioning. From simple adjustments, to complete tune-ups and troubleshooting. The Air Conditioning Manual assists entry-level engineers in the design of air-conditioning systems. It is also usable - in conjunction with fundamental HVAC&R resource material - as a senior- or graduate-level text for a university course in HVAC system design. The manual was written to fill the void between theory and practice - to bridge the gap between real-world design practices and the theoretical calculations and analytical procedures or on the design of components. This second edition represents an update and revision of the manual. It now features the use of SI units throughout, updated references and the editing of many illustrations. * Helps engineers quickly come up with a design solution to a required air conditioning system. * Includes issues from comfort to cooling load calculations. * New sections on "Green HVAC" systems deal with hot topic of sustainable buildings.
