From the New York Times bestselling author and former James Bond novelist comes a gritty, riveting tale of modern crime, featuring a female FBI agent embroiled in a Russian human trafficking case. Chicago Special Agent Annie Marino examines the case of a dead young woman who possesses a tattoo Annie has come across before—that of bloody bear claws. Several deceased women with the tattoo have turned up over the past few years, all suspected of being involved in a vast human trafficking operation. Annie’s neighborhood friend, Jason Ward, is a young writer engaged to be married into an upper-class family from a posh Chicago suburb. Jason believes his future brother-in-law, a war veteran, is definitely a bully—but does he also have ties to the Russian mob? Yana Kravec, a woman from St. Petersburg, Russia, has been fraudulently lured into a trafficking scheme and thrown into a horrid and seemingly hopeless situation. She is, however, determined to fight back and escape her captors. Annie’s investigation eventually uncovers a sordid plot of procuring slaves overseas and marketing them in the US. Her interests soon coincide with those of Jason and Yana, bringing the trio together to fight against a deadly network of criminals. As the separate lives of these characters collide, their paths ultimately converge in a night of terror and survival in a Michigan forest, where they become the prey of evil men who will stop at nothing to protect their secrets.

The New York Times and Wall Street Journal bestseller about how Mitch McConnell has been bad for Kentucky—and why he needs to be voted out of office from the founder of Kentucky Sports Radio and attorney Matt Jones. They say all politics is local. In 2020, Mitch McConnell will have served five full terms as a US Senator. Thirty years. The Senate Majority leader’s power is as undeniable as it is infuriating, and the people of Kentucky have had enough. Led by Matt Jones, they (and they alone) have the power to oust him from office. How did Jones, a local boy turned attorney turned sports radio host come to shine the brightest light on McConnell’s ineptitude? Simple—he knows Kentucky inside and out, and has used the state’s love of sports as an entry point for showcasing how McConnell has failed his fellow citizens both economically and socially for three decades. Entertaining, maddening, yet ultimately inspiring, these stories from Kentuckians in each of its 120 counties illustrate the Senate Majority leader’s stunning shortcomings. “Jones employs a sharp, political scalpel eviscerating McConnell”[and this book is] an effective combination

of description and vivisection" (Kirkus Reviews). Jones brings his trademark wit and wisdom throughout the book, while also offering a beautiful portrait of a state with arguably the most untapped potential in our country. Ultimately, the white-hot hatred for McConnell on the coasts is just white noise. Only the people of Kentucky can remove him from office. Here, Matt Jones demonstrates he has the influence, charisma, and institutional knowledge to lead the charge. He and his fellow Kentuckians have had enough—and they're ready for a fight. Charles Marion Thomas, Jr. gives personal testimony of how he dealt with finding his independence after several years, being a caretaker for his parents as their health began to fail, and speaks candidly about this reality of epic struggle he endured subsequently, leading to a lengthy period of chronic homelessness and living out of his car. Charles believed that when his parents died he would serve the Lord in full-time ministry while still being homeless. To understand what led to his story, he explains to the best of his knowledge, these events as they happened. His initial experience began when his mother had her stroke in 2002 while she was in school and suffered a brain aneurysm while in class on the left side of the brain that paralyzed the right side of her body. Then later his father died from a heart attack in the house in 2006, and the challenge presented itself. Charles decided to put his life on hold to care for them and run the house. While still lacking stable and appropriate housing, he became homeless through no fault of his own but to serve and honor his parents. In the end, Charles explains how the Lord brought him out of a long journey of homelessness. The story about a team who figured out how to build the perfect vehicle, without building a single vehicle, using digital computing technology. The automobile is an icon of modern technology because it includes most aspects of modern engineering, and it offers an exciting approach to engineering education. Of course there are many existing books on introductory fluid/aero dynamics but the majority of these are too long, focussed on aerospace and don't adequately cover the basics. Therefore, there is room and a need for a concise, introductory textbook in this area. *Automotive Aerodynamics* fulfils this need and is an introductory textbook intended as a first course in the complex field of aero/fluid mechanics for engineering students. It introduces basic concepts and fluid properties, and covers fluid dynamic equations. Examples of automotive aerodynamics are

included and the principles of computational fluid dynamics are introduced. This text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero/fluid mechanics. This textbook contains complex mathematics, which not only serve as the foundation for future studies but also provide a road map for the present text. As the chapters evolve, focus is placed on more applicable examples, which can be solved in class using elementary algebra. The approach taken is designed to make the mathematics more approachable and easier to understand. Key features: Concise textbook which provides an introduction to fluid mechanics and aerodynamics, with automotive applications Written by a leading author in the field who has experience working with motor sports teams in industry Explains basic concepts and equations before progressing to cover more advanced topics Covers internal and external flows for automotive applications Covers emerging areas of aeroacoustics and heat transfer Automotive Aerodynamics is a must-have textbook for undergraduate and graduate students in automotive and mechanical engineering, and is also a concise reference for engineers in industry. "Covers U.S. and Canadian models of Ford Fusion and Mercury Milan 2006 through 2010. Does not include information specific to hybrid models." Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures. Your debt has piled high. Winner of the 2018 CCCC Technical and Scientific Communication Award in the category of Best Book in Technical or Scientific Communication Responding to the effects of human mobility and crises such as depleting oil supplies, Ehren Helmut Pflugfelder turns specifically to automobility, a term used to describe the kinds of mobility afforded by autonomous, automobile-based movement technologies and their ramifications. Thus far, few studies in technical communication have explored the development of mobility technologies, the immense power that highly structured, environmentally significant systems have in the world, or the human-machine interactions that take place in such activities. Applying kinaesthetic rhetoric, a rhetoric that is sensitive to and developed from the mobile, material context of these technologies, Pflugfelder looks at transportation projects such as electric taxi cabs from the turn of the century to modern day, open-source vehicle projects, and a large case study of an autonomous, electric pod car network that ultimately failed. Kinaesthetic rhetoric illuminates how mobility technologies have always been persuasive wherever and whenever linguistic symbol systems and material interactions enroll us, often unconsciously, into regimes of movement and ways of experiencing the world. As Pflugfelder shows, mobility technologies involve networks of sustained arguments that are as durable as the bonds between the actors in their networks. This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with "motor" referring to what is now usually called the engine. It has seats for the driver and, almost

without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects. This trip was conceived while I was on my 6 week trip around Europe by trains. It occurred to me that while Europe was very beautiful and exciting, I was equally sure my own country must be every bit as beautiful. And the fact that I had only seen about 25% of it sealed the deal and thus this trip. The clincher was the fact that I was almost killed in an automobile accident on May 31, 2012. Three of my friends and I were just sitting at a stop light when we were slammed from behind killing two of my friends and sending me to the hospital for over a month. That kind of experience changes your entire attitude and priorities; you realize just how short and tenuous life really is. I know my friend John had no idea that just one hour after he had shot his age of 75 for the first time in his life he would be dead. My advice to all of my readers is do not put off anything you have been dreaming about doing. If you can afford it do it. There are no guarantees of tomorrow. So how do you go about planning such a long journey? Our country is so vast and there is no effective way of using trains. Most National Parks are nowhere near our deteriorating rail system (A national disgrace). So I knew I would have to drive. But that was a problem. At age 76 and having a heart problem my cardiologist and my three daughters wouldn't hear of me going alone. So who could I "sucker" uh, persuade to make an 11,460 mile 8 week tour of the United States? There was really only one person I thought of who might be talked into going with me, Ron Schneider. He was an old high school football buddy. I had not seen him for over 40 years. But we got along as if the 40 years were 40 days. We were sitting having dinner when I told him of my desire to travel to all the national parks and see as much of America as I possibly could. He was intrigued and said he would go with me next summer. Yeah! I now had a person that would not only go with me but pay half the expenses. This was in September and we agreed we would leave next May. NOW WHAT? Fortunately I was a member of AAA and they were an immense help in planning this trip. In a few weeks I had road maps from every state in the country along with specialty maps of all the National Parks. Booklets on all the parks, including information on all the camp sites, restaurants, and

hotels including price ranges, It took me several days to lay out a travel plan for the most efficient use of the roads I wanted to drive in order to see what I wanted to see and the best use of our gasoline. I did not want to just travel the interstate system but wanted to see some of the back country such as old Rt. 66 etc. Much to our surprise some of it still exists. In December, 2012 a local Buick dealer called me about trading my 2008 Ford Fusion for a 2013 Buick La Cross. He made me a deal I couldn't refuse. What a perfect car for the trip. It had satellite radio, On Star navigation system, and the E-assist engine which used only one gallon for every 38 miles at 70 miles per hour. We hit the road May 15, 2013. This is the story of our adventures.

"This compelling book shows how to connect the image you present to the outside world with the values and norms that operate inside your world of work." --Adam Grant, New York Times bestselling author of *Originals* and *Give and Take* "Denise Lee Yohn hit a home run with her first book, *What Great Brands Do*. Now she's written

FUSION and it is just as provocative. Denise proves beyond a shadow of a doubt that great companies are powered by brand-culture fusion. I highly recommend this book!" --Ken Blanchard, Coauthor, *The New One Minute Manager*®, Coeditor, *Servant Leadership in Action* Internal culture + External brand = FUSION For years, leaders at companies like Southwest, Starbucks, and Google have done something differently that's put their organizations at the top of "the most admired companies," "best brands," and "great workplaces" lists. They don't often talk about that "something" specifically in terms of brand-culture fusion, but, as author Denise Lee Yohn reveals, aligning and integrating their brands and cultures is precisely how they've achieved their successes. Independently, brand and culture are powerful, unsung business drivers. But Denise shows that when you fuse the two together to create an interdependent and mutually reinforcing relationship between them, you create organizational power that isn't possible by simply cultivating one or the other alone. Through detailed case studies from some of the world's greatest companies (including Amazon, Airbnb, Adobe, Nike, and Salesforce), exclusive interviews with company executives, and insights from Denise's 25+ years working with world-class brands, FUSION provides readers with a roadmap for increasing competitiveness, creating measurable value for customers and employees, and future-proofing their business. This is a must-read for readers interested in workplace culture, brand management, strategy, leadership, employee experience, employee engagement, integration, branding, and organization development. Organizations value insights from reflexive, iterative processes of designing interactive environments that reflect user experience. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation) Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underway) Ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers) GM's 2012 Volt electric car is a mixture of hype and hypocrisy from the car company that "killed" its own electric car more than a decade ago) You can save \$2,000 by cutting freight fees and "administrative" charges) Diesel annual urea fill-up scams can cost you \$300, including an \$80 "handling" charge for \$25 worth of urea) Lemon-Aid's 2011-12 Endangered Species List: the Chinese Volvo, the Indian Jaguar and Land Rover, the Mercedes-Benz Smart Car, Mitsubishi, and Suzuki
