**Ten Years to Midnight** Nov 10 2021 “Shows how humans have brought us to the brink and how humanity can find solutions. I urge people to read with humility and the daring to act.” —Harpal Singh, former Chair, Save the Children, India, and former Vice Chair, Save the Children International In conversations with people all over the world, from government officials and business leaders to taxi drivers and schoolteachers, Blair Sheppard, global leader for strategy and leadership at PwC, discovered they all had surprisingly similar concerns. In this prescient and pragmatic book, he and his team sum up these concerns in what they call the ADAPT framework: Asymmetry of wealth; Disruption wrought by the unexpected and often problematic consequences of technology; Age disparities--stresses caused by very young or very old populations in developed and emerging countries; Polarization as a symptom of the breakdown in global and national consensus; and loss of Trust in the institutions that underpin and stabilize society. These concerns are in turn precipitating four crises: a crisis of prosperity, a crisis of technology, a crisis of institutional legitimacy, and a crisis of leadership. Sheppard and his team analyze the complex roots of these crises--but they also offer solutions, albeit often seemingly counterintuitive ones. For example, in an era of globalization, we need to place a much greater emphasis on developing self-sustaining local economies. And as technology permeates our lives, we need computer scientists and engineers conversant with sociology and psychology and poets who can code. The authors argue persuasively that we have only a decade to make headway on these problems. But if we tackle them now, thoughtfully, imaginatively, creatively, and energetically, in ten years we could be looking at a dawn instead of darkness.

**It Is about the Strategy** Dec 23 2022 Information Services departments in many businesses fail to align with the business and struggle to provide the proper level of business and support. The objective of this book is to provide strategic solutions for executive leadership with ultimate responsibility for Information Services. These strategic solutions will remove performance barriers.

**Cracked it!** Feb 01 2021 Solving complex problems and selling their solutions is critical for personal and organizational success. For most of us, however, it doesn't come naturally and we haven't been taught how to do it well. Research shows a host of pitfalls trips us up when we try: We're quick to believe we understand a situation and jump to a flawed solution. We seek to confirm our hypotheses and ignore conflicting evidence. We view challenges incompletely through the frameworks we know instead of with a fresh pair of eyes. And when we communicate our recommendations, we forget our reasoning isn't obvious to our audience. How can we do it better? In *Cracked It!*, seasoned strategy professors and consultants Bernard Garrette, Corey Phelps and Olivier Sibony present a rigorous and practical four-step approach to overcome these pitfalls. Building on tried-and-tested (but rarely revealed) methods of top strategy

consultants, research in cognitive psychology, and the latest advances in design thinking, they provide a step-by-step process and toolkit that will help readers tackle any challenging business problem. Using compelling stories and detailed case examples, the authors guide readers through each step in the process: from how to state, structure and then solve problems to how to sell the solutions. Written in an engaging style by a trio of experts with decades of experience researching, teaching and consulting on complex business problems, this book will be an indispensable manual for anyone interested in creating value by helping their organizations crack the problems that matter most.

**Realistic Decision Theory** Nov 17 2019 Within traditional decision theory, common decision principles -- e.g. the principle to maximize utility -- generally invoke idealization; they govern ideal agents in ideal circumstances. Bridging the gap between normative demands and psychological resources, *Realistic Decision Theory* is essential reading for theorists seeking precise normative decision principles that acknowledge the limits and difficulties of human decision-making.

**The Business Analyst as Strategist** Jun 05 2021 An organization's ability to achieve strategic goals through programs and supporting projects depends on its ability to establish a future vision, set strategic goals, select the most valuable projects, and then execute flawlessly. Organizational strategic alignment is achieved by converting strategic plans and goals into a valuable portfolio of programs and supporting projects. Strategic project leaders and project teams execute the project plans to meet objectives and deliver project outcomes, adding value to the organization. As the role of the business analyst evolves and matures, senior business analysts will emerge as the key individuals in the organization who have the depth of business acumen and technological proficiency to serve as both business and technology experts. In this capacity, business analysts will become involved in an array of activities designed to devise a strategy to reach the organization's future business vision by achieving strategic goals. As the business analyst elevates into a leadership role as the business and technology strategist, he or she serves the executive team by facilitating, informing, and enabling the most favorable business decisions during the strategic planning and enterprise analysis phases of the business solution life cycle (BSLC). This book examines the emerging critical role of the business analyst during these first two phases of the BSLC.

**On Behavior Strategy Solutions of Finite Two-person Constant-sum Extended Games** Sep 20 2022 Through the introduction of a concept called recall-sensitivity, it is demonstrated that perfect recall (each player remembers all of its past actions and past knowledge of the other player's and nature's actions) is a sufficient but not a necessary condition for the existence of behavior strategy solutions and epsilon-solutions in finite two-person constant-sum extended games. A method is presented by which behavior strategies meeting a necessary condition for solutions or epsilon-solutions may be generated. Comments are made on the practical implications of the material presented. (Author).

In *Strategy That Works*, Paul Leinwand and Cesare Mainardi explain why. They identify conventional business practices that unintentionally create a gap between strategy and execution. And they show how some of the best companies in the world consistently leap ahead of their competitors. Based on new research, the authors reveal five practices for connecting strategy and execution used by highly successful enterprises such as IKEA, Natura, Danaher, Haier, and Lego. These companies: • Commit to what they do best instead of chasing multiple opportunities • Build their own unique winning capabilities instead of copying others • Put their culture to work instead of struggling to change it • Invest where it matters instead of going lean across the board • Shape the future instead of reacting to it Packed with tools you can use for building these five practices into your organization and supported by in-depth profiles of companies that are known for making their strategy work, this is your guide for reconnecting strategy to execution.

**Building Digital Government Strategies** Oct 17 2019 This book provides key strategic principles and best practices to guide the design and implementation of digital government strategies. It provides a series of recommendations and findings to think about IT applications in government as a platform for information, services and collaboration, and strategies to avoid identified pitfalls. Digital government research suggests that information technologies have the potential to generate immense public value and transform the relationships between governments, citizens, businesses and other stakeholders. However, developing innovative and high impact solutions for citizens hinges on the development of strategic institutional, organizational and technical capabilities. Thus far, particular characteristics and problems of the public sector organization promote the development of poorly integrated and difficult to maintain applications. For example, governments maintain separate applications for open data, transparency, and public services, leading to duplication of efforts and a waste of resources. The costs associated with maintaining such sets of poorly integrated systems may limit the use of resources to future projects and innovation. This book provides best practices and recommendations based on extensive research in both Mexico and the United States on how governments can develop a digital government strategy for creating public value, how to finance digital innovation in the public sector, how to building successful collaboration networks and foster citizen engagement, and how to correctly implement open government projects and open data. It will be of interest to researchers, practitioners, students, and public sector IT professionals that work in the design and implementation of technology-based projects and programs.

**Thinking Strategically in Turbulent Times: An Inside View of Strategy Making** May 16 2022 An emergent approach to organizational strategy making assumptions that few organizations actually realize the goal of deliberative, top-down strategic planning, and that effective strategy making occurs on a continual basis and is a shared activity of the entire organization. This innovative book provides the first in-depth look at how real organizations are formulating and implementing strategic change under this new paradigm. The authors have dug deep into three large and varied organizations (Hewlett-Packard, the California State University system, and the County of Los Angeles) and identified each one's efforts to develop a new strategic planning process better-suited to match the current pace of change and environmental unpredictability. The book is filled with vignettes, quotes, and real-world examples that illustrate the trend toward faster, more adaptive strategic planning processes. It is relevant for a wide range of business, governmental, and non-profit settings, and should be required reading in any course on strategic planning.

**Managing the Aging Workforce** Sep 27 2020 Managing the Aging Workforce is one of the crucial topics for many of the world's enterprises. The increasing average age of populations does not only affect social systems, countries and communities, but also has a strong impact on the work of businesses and companies. The decline in demographic fitness will not only hit countries like the U.S., the Western European countries, or Japan, but also the upcoming societies in China or in the Eastern European countries. In many of these countries, during three or four decades the average age will grow from about

40 years now to about 50 years. Where experts are needed, this may result in an increase of the workforce's age of between 5 and 10 years in only one decade. For companies thus, a number of challenges arise that have to be overcome fast and continuously. The main topics in this field will be new strategies in leadership, new concepts in health management, new ways in knowledge management and learning, as well as new models how to drive ideas for diversity and innovation. On the one hand, enterprises therefore will have to invest in their aging employees for supporting their talents, helping them to learn and keeping them in the company. On the other, they will have to increase productivity, keep on searching for new products, and integrate experts from abroad. This has to be combined with new ways of strategies and HR management. This book presents an analysis of the present and upcoming situation, and an introduction into the strategic concepts enterprises will need to survive in aging societies.

**Managing Business Complexity** Mar 14 2022 Agent-based modeling and simulation (ABMS), a way to

simulate a large number of choices by individual actors, is one of the most exciting practical developments in business modeling since the invention of relational databases. It represents a new way to understand data and generate information that has never been available before--a way for businesses to view the future and to understand and anticipate the likely effects of their decisions on their markets and industries. It thus promises to have far-reaching effects on the way that businesses in many areas use computers to support practical decision-making. Managing Business Complexity is the first complete business-oriented agent-based modeling and simulation resource. It has three purposes: first, to teach readers how to think about ABMS, that is, about agents and their interactions; second, to teach readers how to explain the features and advantages of ABMS to other people and third, to teach readers how to actually implement ABMS by building agent-based simulations. It is intended to be a complete ABMS resource, accessible to readers who haven't had any previous experience in building agent-based simulations, or any other kinds of models, for that matter. It is also a collection of ABMS business applications resources, all assembled in one place for the first time. In short, Managing Business Complexity addresses who needs ABMS and why, where and when ABMS can be applied to the everyday business problems that surround us, and how specifically to build these powerful agent-based models.

*The New How [Paperback]* Aug 07 2021 What people are saying about The New How "How are you going to get rid of your Air Sandwich if you don't even know what it is? Provocative and practical at the same time." --Seth Godin, author of Linchpin "The New How is informative and provides exciting insights because the suggestions are practical and doable. Merchant gets the new reality--leadership fails not so much from flawed strategy as it does from failed processes of engagement from those responsible for implementing the strategy. In high-performing organizations, everyone acts like a leader, and they own the strategy and take actions to ensure its success. If you care about making a difference, read this book." --Barry Posner, author of The Leadership Challenge "Collaboration is a powerful, competitive weapon: this book shows you how to use it to win markets." --Mark Interrante, VP Content Products, Yahoo, Inc. "In a world in which the pace of change is ever quickening, collaboration, not control, is the route to a successful organization. This book tells you how to make your organization collaborative. And Nilofer Merchant's writing is a model of clarity." --Barry Schwartz, author of The Paradox of Choice: Why More Is Less "Want to transform your organization into a collaborative enterprise? Nilofer Merchant provides insightful and practical strategies in The New How." --Padmasree Warrior, CTO, Cisco Systems, Inc. "Merchant's book is a practical guide for the journey from strategy to implementation. The collaborative tools described here can help companies reach strategic success--and avoid pitfalls along the way." --Tom Kelley, General Manager, IDEO, and author of Ten Faces of Innovation Once in a generation, a book comes along that transforms the business landscape. For today's business leaders, The New How redefines the way companies create strategies and win new markets. Management gurus have always said "people matter." But those same gurus still relegate strategy to an elite set of executives who focus on frameworks, long presentations, and hierarchical approaches. Business strategy typically has been planned by corporate chiefs in annual meetings, and then dictated to managers to carry out. The New How turns that notion on its head. After many years of working with Apple, Adobe, HP, and many other companies, Nilofer Merchant discovered the secret sauce: the best way to create a winning strategy is to include employees at all levels, helping to create strategy they not only believe in, but are also equipped to implement. In The New How, Nilofer shows today's corporate directors, executives, and managers how they can transform their traditional, top-down approach to strategy planning and execution into collaborative "stratecutation" that has proven to be significantly more effective. Enhance performance and outcomes by deflating the "air sandwich" between executives in the boardroom and employees Recognize that strategy and execution are thoroughly intertwined Understand how successful strategy is founded in effective idea selection-a pile of good ideas doesn't necessarily build good strategy Create company strategy and link it to targeted execution, using the practical models and techniques provided
